

Prior to LabStas, we had in-house lab tracking software. It was a system where students would log in and out of a lab by swiping their ID card. It turned out to be an ineffective system: some students would forget to swipe out, others wouldn't be recognized in the system, some didn't bother to read the instructions on the screen – we were getting inaccurate tracking results.

LabStats helped to solve the accountability of tracking students and how much time they spent in our labs. We were able to get rid of the card system, and move on to a more efficient, and most importantly, accurate way of tracking student logins.

It helped us as we used its reports for our Title III budgeting, and continues to help us with budgeting as we can show the administration what labs are being utilized when, and how often. Several decisions concerning our labs have been aided by LabStats reports.

LabStats is easy to learn, user-friendly and easy to use. We have 40 labs spread across campus and it's helped us keep tabs on all of them.
